Our Core Competencies

- Encryption Software
- PC Security
- Mobile Device Protection
- Certificate Authentication
- Customized Security Applications
- Consulting Services

About Us

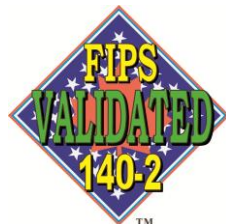

DeltaCrypt Technologies Inc. ("DeltaCrypt") is specializing in public key encryption software applications and it cumulates years of experience in helping protect sensitive data of leading private and government organizations. With strong encryption, digital signature and secure file shredding, DeltaCrypt solutions are tailored for the traditional and the virtual computing environments.

DeltaCrypt provides a full suite of encryption solutions for securing sensitive data on computer hard drives, mobile devices, emails exchanges, to name a few. In addition to its product portfolio, it can also deliver custom encryption solutions to meet highly specific requirements.

DeltaCrypt latest solution, the DUSK Suite, reduces mobile vulnerabilities, raises situational awareness, and prevents data leakage. When mobile devices such as USB drives are used on more than a single network, the protection multiple secure partitions segregate data and selectively link each partition to a specific network. The secure multi-partitions eliminate the need to trail around several USB devices in pockets or around your neck.

 DeltaCrypt has been proudly developing a multi-token authentication system for the Canadian National Defence.

DeltaCrypt encryption solutions are FIPS validated.

Our Experience

Mobility and a rigid regulatory climate, focused on controlling corporate information, significantly challenge today's IT administrators charged with securing organizational data and networks.

DeltaCrypt feels quite concerned with growing regulatory compliance needs, identity theft and identity management organizations are now facing in today's business world. We believe that DeltaCrypt applications can play a positive role in providing the right practical security tools to resolve those security concerns.

Think of some of the legislations that are changing the way we deal with stored information:

- HIPAA (US - Health Insurance Portability and Accountability Act)
- SOX (US - Sarbanes Oxley)
- GLBA (US - Gramm-Leach-Bliley)
- California SB 1386 (US)
- PIPEDA (Canada - The Personal Information Protection and Electronic Documents Act)
- DPA (UK- Data Protection Act)

Our clients include very demanding organizations for which total security is of prime importance (governments, R&D, High Tech, Financial Institutions, Lotteries, Oil & Gas, etc.).

Contact us and let us know about the challenges you need to solve. We look forward to listening to your needs and analyzing them with you to better determine how we can assist you in meeting your day-to-day security challenges.
