Our Core Competencies

- Encryption Software
- PC security
- USB device Protection
- Customized Security Applications
- Consulting Services

About Us

DeltaCrypt is one of the world leaders in encryption software technology. In Canada, it is the only software manufacturer that can provide a comprehensive solution to corporate encryption needs. And DeltaCrypt is the only company that provides direct service and support in both English & French.

We believe it is better to offer a comprehensive set of tools and let Users make the decisions. We can even adapt our solutions to particular needs. Our experienced consultants and engineers have learned to listen carefully to our customers' preoccupations. Experience has also taught us that our role is not to replace the User's security specialist, nor to dictate which policy should be implemented, or which algorithm should be used. Our role consists of guaranteeing our customers that they can rely on a complete set of software tools that allow them all the flexibility and the level of security they need in order to meet their organization's goals. In other words, we try to always respond to our customers' requests with, in mind, the global picture, the complete business perspective.

Specific Services and Products for FIPS, ITIL, COBIT... Users

Our development approach relies heavily on certification and proven best practices including FIPS, ITIL, Six-Sigma, COBIT, to name just a few, in order to meet the highest standards and top quality for all our products.

Our Experience

Since 2000, our team of professionals has been concentrating on developing and adapting numerous software products related to corporate security and encryption. Prestigious, security-conscious customers from around the world have joined us over the years.

DeltaCrypt's president being a lawyer, we feel quite concerned with growing regulatory compliance needs, identity theft and identity management organizations are now facing in today's business world. We believe that DeltaCrypt applications can play a positive role in providing the right practical security tools to resolve those security concerns.

Think of some of the legislations that are changing the way we deal with stored information:

- HIPAA (US - Health Insurance Portability and Accountability Act)
- SOX (US - Sarbanes Oxley)
- GLBA (US - Gramm-Leach-Bliley)
- California SB 1386 (US)
- PIPEDA (Canada - The Personal Information Protection and Electronic Documents Act)
- DPA (UK- Data Protection Act)

Our clients include very demanding organizations for which total security is of prime importance (governments, R&D, High Tech, Financial Institutions, Lotteries, Oil & Gas, etc.).

All our products have been built with the User's daily concerns in terms of security and compliance. Now, we look forward to listening to your needs and analyzing with you how we can help you meet your day-to-day security challenges.
