

## Secure Backup Solution

Not only do you get automatic backups but you get the assurance that your backups get the best encryption protection at the same time. DeltaCrypt Secure Backup Solution provides easy to set backup functionality. Determine which files and folders you need to backup, indicate the encrypting public key to use and select where you want DeltaCrypt to put your backups.

Every selected file is encrypted individually. You end up with as many encryptions as original files selected. This offers the advantage of being able to later decrypt just the one encrypted file you need, while all of the others remain protected.

### Compliance and Legislation

Spending on security technologies is being driven by a number of concerns – regulatory compliance, identity theft and identity management being the top three. The following legislations require encryption of stored information:

- HIPAA (US - Health Insurance Portability and Accountability Act)
- SOX (US - Sarbanes Oxley)
- GLBA (US - Gramm-Leach-Bliley)
- California SB 1386 (US)
- PIPEDA (Canada - The Personal Information Protection and Electronic Documents Act)
- DPA (UK- Data Protection Act)

### How Secure Backup works

- Installation is done by running an executable file on the computer
- The first step to encryption is to create a public key to be later used for encrypting.
- Configuring begins by making a file and folder selection to backup
- The public key to be used for encrypting is then indicated to the system
- The destination folder to save the encrypted backup is selected
- A new Scheduled Task is enabled using Scheduled Task Wizard or by manually creating one. This new Scheduled Task will automatically perform the encrypted backup's functions.

### Benefits

- Individual encryption of backup files allowing selective decryption of files
- Automated backup functionalities

### Secure Backup features

Individual encryption of files	Easy to configure
Selective decryption of backup file	No encryption volume limitation
Automatic encryption functions	Transparent to use

## Why DeltaCrypt?

DeltaCrypt was created to provide organizations management with genuine peace of mind for more and more valuable corporate mobile data. From customers' data to collaborative exchanges and communications, DeltaCrypt offers protection for sensitive data against external and internal intrusions.

### **Complete range of encryption products**

DeltaCrypt offers a complete range of public key encryption applications. Whether you wish to protect your PCs, data exchanges, emails, USB flash memory drives, as well as your backups, DeltaCrypt offers you the right solution.

### **Custom-Built Solution**

Don't let your organization's special requirements keep you from protecting sensitive corporate data. Any of the DeltaCrypt public key encryption solutions can be adapted to your environment.

### **FIPS 140-2 Certification**

DeltaCrypt Encryption Applications are FIPS 140-2 Certified (the Federal Information Processing Standard--FIPS--Publication 140-2 is a U.S. government computer security standard for accrediting cryptographic modules).

### **Strong Presence in security-conscious organizations and Industries**

Governments, R&D, High Tech, Financial Institutions, Lotteries, Oil & Gas, etc.

### **Canadian software products**

DeltaCrypt Technologies Inc. is a privately-owned Canadian company located in the Province of Quebec.

### **Bilingual Solutions and Support**

DeltaCrypt applications can be used to the User's discretion in both French and English. DeltaCrypt's customer support is also available in both French and English.
