

OneClick Home Edition to protect your files and folders

DeltaCrypt OneClick Home Edition is the perfect protection for your personal files and folders. It offers the basic encryption functionalities to secure sensitive files on your home computer or on your personal laptop.

DeltaCrypt OneClick Home Edition lets a User create his/her own encrypting key. It also enables a User to determine how he/she wants encryption to be performed: in batch or one-to-one.

Secure your personal data or exchange safely with correspondents.

How OneClick Home Edition works

- Installation is done by running an executable file on the computer
- The first step to encryption is to create a public key to be later used for encrypting.
- When beginning a session, one chooses if encryption should be performed in batch or one-to-one.
- If batch mode is chosen, the encrypted files will result into one encrypted file while if one-to-one mode if preferred, the encryption will result into as many encrypted files as original ones.

Benefits

- Full control over the encrypting keys used for encrypting
- User's prerogative to choosing the type of encryption to be performed

OneClick Home Edition features

Batch encryption or one-to-one encryptions	Enables secure exchanges
File and folder protection	No encryption limitation

When you think of your own personal assets, chances are your home, car, and savings and investments come to mind. But what about your Social Security number (SSN), telephone records and your bank and credit card account numbers?

Are you taking steps to protect personal information?

OneClick Home Edition makes encryption an easy step to keeping your records on your computer safe.

Why DeltaCrypt?

DeltaCrypt was created to provide organizations management with genuine peace of mind for more and more valuable corporate mobile data. From customers' data to collaborative exchanges and communications, DeltaCrypt offers protection for sensitive data against external and internal intrusions.

Complete range of encryption products

DeltaCrypt offers a complete range of public key encryption applications. Whether you wish to protect your PCs, data exchanges, emails, USB flash memory drives, as well as your backups, DeltaCrypt offers you the right solution.

Custom-Built Solution

Don't let your organization's special requirements keep you from protecting sensitive corporate data. Any of the DeltaCrypt public key encryption solutions can be adapted to your environment.

FIPS 140-2 Certification

DeltaCrypt Encryption Applications are FIPS 140-2 Certified (the Federal Information Processing Standard--FIPS--Publication 140-2 is a U.S. government computer security standard for accrediting cryptographic modules).

Strong Presence in security-conscious organizations and Industries

Governments, R&D, High Tech, Financial Institutions, Lotteries, Oil & Gas, etc.
