

## DUSKWatch Manager

How do corporate users feel about their experience when new security is implemented? Have you solved a possible security issue or created new irritants for corporate users?

### Comprehensive Tools For Administrators

The DUSKWatch Manager offers a set of tools for administrators that range from corporate access to the organization's encrypted data to user support.

#### Master Keys

DUSK-USB protection for mobile data grants management access to secure data by embedding a Master Key. This Master Key creation is made possible using the DUSKWatch Manager console. This corporate access is created by the administrator and may be changed when needed. This way, management may recover secured corporate files at all times.

#### DUSK-USB Support

Whether it is making a shadow copy of files, recovering backups of user's encrypted data, or providing a temporary password to help a user, DUSKWatch Manager makes user support easy for DUSKWatch Protection.

#### Improve Environmental Awareness

DUSKWatch Manager records USB drive connections on network and provides detailed reports of USB drive activities to help better determine risky user behaviors or vulnerable workstations that require your organization's attention.

**DUSKWatch Manager not only provides a comprehensive set of tools, it also**

- Works with all DeltaCrypt corporate solutions
- Enables to recover users' data
- Provides users' support

## Identity Certificate Management

The DUSKWatch Manager plays a key role in certificate management for DUSKWatch Trust strong authentication. It enables administrators to store user credential certificates on a DUSK-ID token (i.e. USB soft token or smart cards), to set token PINs as well as to lock and unlock user tokens.

- Creation of master keys
- Backup and shadow copies of protected drives
- Temporary user passwords
- Log reports
- PIN configuration
- User certificate management

## Technical Information

### Microsoft-Compatible Solution

Windows 10 64bits  
Windows 8.1 64bits  
Windows 7 64bits  
Windows XP 32bits  
Windows Server 2012 R2 64bits  
Windows Server 2008 R2 64bits

### Installation

Executable file (.msi)
