

# DUSKWatch USB Control

To control USB storage devices that connect to your computers

## Granular Control

DUSKWatch USB Control allows for selecting or blocking USB storage devices using different criteria: brand, model and serial number. Devices may be whitelisted and blacklisted.

## Transparent Filter

DUSKWatch USB Control installs on workstations. Completely transparent, it continuously filters without possible interruption regardless of user privileges and rights.

## Prevention of Data Losses

Using the DUSK-USB protection, it is possible to filter and control outgoing files on USB thumb drives. Whether using file format or volume, the copies can be blocked or simply trigger an alert transmitted by email and recorded in the event reports. Shadow copies enable to capture outgoing file content.

## Label Groups of Devices

Use the label feature to structure the permissions of several groups of users that access network data using USB removable storage devices. The label function facilitates large scale policy enforcement and deployment. Ideal for any collaborative environment.

## Prevent Unauthorized Data Introduction

Restrict USB drives to a domain environment to prevent sensitive data from leaving a network as well as to prevent unauthorized content from being introduced.

**When combined with DUSK-USB protected drives, the DUSKWatch USB Control allows to:**

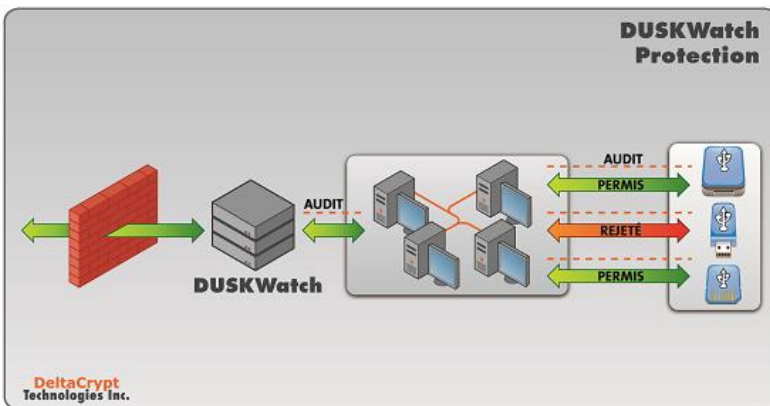

- Monitor outgoing data
- Control the volume and format of outgoing data
- Restrict flash-drives usage to the organization's network
- Group USB thumb drives under a same label with specific assigned permissions.
- Get a backup copy / shadow copy of outgoing files
- Notify without delay when accessing selected data

🇨🇦 **Controlled Goods Program**  
Registered with the  
Controlled Goods Program

🇨🇦 **Military Security Clearances**  
Computer Programmers that have  
military security clearances

FIPS-validated encryption

## Technical Information

### Microsoft Compatibility

Windows 10 64bits  
Windows 8.1 64bits  
Windows 7 64bits  
Windows XP 32bits  
Windows Server 2012 R2 64bits  
Windows Server 2008 R2 64bits

### Configuration

Active Directory de Microsoft  
Executable .msi file

### Database

Microsoft SQL Server, My SQL, Postgre SQL
