

Security Assessment Services

The DeltaCrypt Security Assessment team can help you prevent cyberattacks and information breaches. DeltaCrypt helps resolve security vulnerabilities proactively.

The Problem

Can your organization face and confront a cyberattack or a disgruntled employee? Unfortunately for many, the answer is no. All organizations face the same and important issue: security.

Protecting your organization's data and the one of your customers is a consideration held at the highest levels, from C-Level executives to the board of directors.

The Solutions

Information Technology Security Analysis

Organizations struggle to ensure proper defense is implemented to protect their valuable information. This is why we try to understand the existing information technology control framework, and identify where organizations are most vulnerable to cyber threats and attacks. In short, we are methodological and strategic, and tailor our services based on global IP standards.

Assessment Benefits

- Improve security and data protection
- Vulnerabilities diagnostics report
- Propose options to mitigate security issues
- Reduce security risk and effort
- Raise security environment awareness

Actionable Analysis

The value that DeltaCrypt brings is in making sense and deriving a meaningful analysis. Our Security Assessment report demonstrates our professional and systemic approach to security.

We are focused on providing a report that describes the risks and remediation approaches in a way that anyone can understand and act upon. Our strong report offers practical advices, substantiates our findings, and offers the right balance between tactical and strategic recommendations.

DeltaCrypt Team
